Dokimos

Judgment, proven. Verified expert judgment from the people who lived the job.

Capability sheet, October 2026
Port Wentworth, Georgia
griffinjoshua615@gmail.com

WHAT DOKIMOS DOES

Dokimos writes down the judgment that is not in the manual, as tasks with exact answers, and proves it. The product is the ground truth AI does not have: the calls an experienced PLL clerk, dispatcher or maintenance sergeant makes that no written policy contains. Every item ships with one exact answer, a deterministic verifier, and the record of which blind solvers failed it.

01

Dokimos Environments

Expert-authored tasks and full environments in tacit sustainment domains for AI labs and expert-data vendors. Shared or exclusive. Priced per task or per environment.

02

Dokimos Engine

Unit-level Class IX decision support that turns GCSS-Army exports into a verified action list, gated by clerk-authored tests. Army first, then fleets and depots.

03

Dokimos Course

A public, scheduled two-day class on PLL and Class IX readiness judgment. $1,250 per seat, eight seats per class, structured for purchase-card buying (SF-182).

0/5 **Models solve written rules and fail unwritten judgment.** On an independent benchmark program (Sep 24 to Oct 3, 2026), frontier AI models solved the founder's written-rule accrual task in every automated trial and failed his Class IX stockage judgment task in zero of five. Same author, same grader, same format. The difference was whether the answer lived in a policy or in a clerk's head.

THE PROTOCOL

Elicit
Pull the cases out of the people who carry the judgment, one decision at a time.

Author
One exact answer per task and a verifier that needs no human in the loop.

Probe
Blind solvers run first. Anything cleared on rules alone goes back.

Prove
Exact grading, pass rate and probe log delivered with every item.

DOMAINS

- Class IX parts judgment: dead, duplicate and superseded requisitions; shop stock; turn-ins
- Dispatch and 5988-E fault flow; deadline and NMC recovery under parts and funds constraints
- Forward maintenance and expeditionary supply
- Warehouse and sort operations: staffing, flow, bottlenecks
- Month-end accrual and reconciliation against written policy (the control case)

New domains come through a bench of veteran and industrial co-authors working under the same protocol.

FOUNDER

Joshua Griffin. Six years U.S. Army motor transport, Sergeant (E-5): PLL clerk (Class IX ordering, shop stock, turn-ins), dispatch and 5988-E, maintenance deadline and NMC tracking, parts surge during a major training rotation. Area manager at an Amazon sort and delivery center, about 160 associates on live metrics. B.S. Business Analytics, accounting minor. MBA, University of Florida, December 2026. Authored the Class IX benchmark task above.

COMMERCIAL

- Pricing posture: per task, per environment, exclusivity at a multiple of the shared rate; course seats at a public price
- Owned by a service-disabled veteran; SAM.gov UEI Q6XEWKD1CDD1, CAGE pending; SBA VetCert planned
- Dokimos is a brand of Sprigwise LLC, a Georgia LLC formed August 2026; Port Wentworth, GA; work delivered remotely anywhere in the U.S.

WORKING WITH IBM TOOLING

Stockage and distribution optimization under constraints is explored with IBM Qiskit as a labeled research thread. No quantum-advantage claims. Any model can serve as the interface layer; the judgment library and verifiers are model-independent.
